

Spondias dulcis Parkinson, 1773 (Pomme cythère)

Identifiants : 3224/spodul

Fiche réalisée par Patrick Le Ménahèze ([Le Potager de mes/nos Rêves](#))
Dernière modification le 24/09/2020

- **Classification/taxinomie :**
 - **Famille :** Anacardiaceae ;
- **Synonymes :** *Spondias cytherea* Sonn. 1782 ;
- **Synonymes français :** casse mango, pomme d'or, ambarella ;
- **Nom(s) anglais et/ou international(aux) :** golden apple ;
- **Rapport de consommation et comestibilité/consommabilité inférée (partie(s) utilisable(s) et usage(s) alimentaire(s) correspondant(s)) :** Partie(s) comestible(s) : fruit, feuilles, légume.
Utilisation(s)/usage(s) culinaires :
 - les fruits sont consommés après épluchage ; ils sont consommés crus ou picklés ; les fruits sont également séchés et utilisés dans les currys ; les fruits sont également utilisés pour les boissons sucrées et transformés en confitures et chutneys ; les fruits verts sont picklés ;
 - les feuilles sont comestibles crues ou cuites (ex. : comme potherbe) ;
 - le noyau de la graine peut être comestible (certains fruits sont de petite taille et très aigres).

Précautions à prendre :

néant, inconnus ou indéterminés.

- **Liens, sources et/ou références :**

dont classification :
