

# **Bambusa tulda Roxb.**

**Identifiants : 4157/bamkul**

**Association du Potager de mes/nos Rêves (<https://lepotager-demesreves.fr>)**

**Fiche réalisée par Patrick Le Ménahèze**

**Dernière modification le 06/05/2024**

- **Classification phylogénétique :**

- Clade : Angiospermes ;
- Clade : Monocotylédones ;
- Clade : Commelinidées ;
- Ordre : Poales ;
- Famille : Poaceae ;

- **Classification/taxinomie traditionnelle :**

- Règne : Plantae ;
- Division : Magnoliophyta ;
- Classe : Liliopsida ;
- Ordre : Cyperales ;
- Famille : Poaceae ;
- Genre : Bambusa ;

- **Synonymes : Dendrocalamus tulda (Roxb.) Voigt, Bambusa longispiculata Gamble ex Brandis ;**

- **Nom(s) anglais, local(aux) et/ou international(aux) : Bengal bamboo, Spineless Indian bamboo, , Auwa gubwi, Ba, Bambu india, Banse, Bas, Bong, Calcutta cane, Chat-wa, Chekeme, Deo-bans, Deobans, Govatuai, Govatuo, Jati bah, Kharra, Karil, Mai bong, Mak, Peka, Phai hangchang, Phai-bongdam, Rawthing, Talagu-wa, Taru bans, Thaik-wa, Tre xim, Tulda, Tusa, Wandal ;**

- **Note comestibilité : \*\***

- **Rapport de consommation et comestibilité/consommabilité inférée (partie(s) utilisable(s) et usage(s) alimentaire(s) correspondant(s)) :**

**Pousses<sup>0(+x)</sup>.**

**Les jeunes pousses sont bouillies et mangées. L'eau est changée. Ils sont également utilisés dans la soupe. Ils sont également marinés. Les jeunes pousses récoltées peuvent être stockées pendant 8 à 10 jours. Ils sont également séchés pour une utilisation future**

**Partie testée : pousses<sup>0(+x)</sup> (traduction automatique)**

**Original : Shoots<sup>0(+x)</sup>**

- Autres infos :

dont infos de "FOOD PLANTS INTERNATIONAL" :

- Statut :

*Il est important dans le nord de la Thaïlande pour les pousses comestibles. C'est courant au Bangladesh. Il est très demandé en tant que pousses de bambou. Il est vendu sur les marchés locaux*<sup>||(0(+x)) (traduction automatique)</sup>.

*Original : It is important in northern Thailand for edible shoots. It is common in Bangladesh. It is in high demand as bamboo shoots. It is sold in local markets*<sup>||(0(+x))</sup>.

- Distribution :

*Une plante tropicale et subtropicale. Il pousse au Népal à 200-1200 m d'altitude. Il pousse dans les sols humides près des rivières. Il pousse jusqu'à 1500 m d'altitude au Bangladesh. Dans les jardins botaniques de Cairns. Au Yunnan*<sup>||(0(+x)) (traduction automatique)</sup>.

*Original : A tropical and subtropical plant. It grows in Nepal at 200-1200 m altitude. It grows in moist soils near rivers. It grows up to 1500 m altitude in Bangladesh. In the Cairns Botanical Gardens. In Yunnan*<sup>||(0(+x))</sup>.

- Localisation :

*Asie, Australie, Bangladesh, Bhoutan, Chine, Himalaya, Inde - Assam, Indochine, Indonésie, Laos, Myanmar, Népal, Inde du nord-est, Pacifique, Philippines, Asie du Sud-Est, Thaïlande, USA, Vietnam*<sup>||(0(+x)) (traduction automatique)</sup>.

*Original : Asia, Australia, Bangladesh, Bhutan, China, Himalayas, India - Assam, Indochina, Indonesia, Laos, Myanmar, Nepal, Northeastern India, Pacific, Philippines, SE Asia, Thailand, USA, Vietnam*<sup>||(0(+x))</sup>.

- Notes :

*Il existe environ 120 espèces de Bambusa. Ils sont tropicaux et subtropicaux en Asie*<sup>||(0(+x)) (traduction automatique)</sup>.

*Original : There are about 120 Bambusa species. They are tropical and subtropical in Asia*<sup>||(0(+x))</sup>.
